Project Proposal

	Description	Fill in
Stack Focus	Is the front-end UI or the back-end going to be the focus of your project? Or are you going to make an evenly focused full-stack application?	This would likely need to be a full-stack application.
Type	Will this be a website? A mobile app? Something else?	A website but it could later also be made into an app.
Goal	What goal will your project be designed to achieve?	To provide movie watchers a place to rate, review, and log movies, as well as view their movie statistics and viewing habits based on the movies they've watched.
Users	What kind of users will visit your app? In other words, what is the demographic of your users?	Users will consist of individuals who love movies.
Data	What data do you plan on using? How are you planning on collecting your data? You may have not picked your actual API yet, which is fine, just outline what kind of data you would like it to contain. You are welcome to create your own API and populate it with data.	Would use an external API to get the movie data, likely the OMDb API. User data would be collected and viewable to the user.
